

PATRIOT NICKEL

Forging America's Nickel Independence

Investor Presentation | Q4 2025

Technology Partner

CVMR® Corporation | Vapour Metallurgy |
40+ Years Global Experience

info@patriotnickel.com

Securing America's Supply Chains

The Global Nickel Market

Nickel's rapidly increasing demand reflects its essential role in the global energy transition.

70% of nickel production is used in manufacturing stainless steel. Growth sectors: EV Batteries, Aerospace, Renewable Energy.

US\$46B

Annual Value
(up 10% YoY)

7.5%

CAGR Projected
Through 2033

Global Nickel Production (2024)

- 62% - Indonesia
- 0.2% - United States*
- *The only producing nickel mine in the US
- (Eagle Mine, Michigan) closes in 2029

Policy Boost

- Biden-Harris 2024 critical mineral status
- Trump EO 14241 (Mar 2025) fast-tracks via FAST-41
- 10-25% import tariffs (Aug 2025) target
- Indonesian dominance

US Gap = Patriot's Edge

- No major US laterites - our Oregon assets
- deliver low-capex, ESG-safe mining to fill the gap

The EV Revolution Demands Domestic Nickel

Explosive Growth

From 55 GWh/year (2021) to ~1,000 GWh/year (2030) - 20x surge driven by IRA incentives, tariffs, and EV mandates.

Battery Belt Focus

Southeast US (GA, KY, TN, NC, SC) dominates 60%+ of new capacity; 10+ factories online in 2025 alone.

Key Driver

Tesla's NV Gigafactory (100 GWh, largest in NA) needs 35+ GWh Ni annually - Oregon laterites fill the gap.

Patriot Tie-In

Our 1.1B+ lbs Ni resources = low-capex feedstock for 500k+ EVs/year.

Global Nickel Supply vs Demand

Surplus Today, Tight Tomorrow - Demand Outpaces Supply by 2026

2025 Surplus

198kt surplus (production 3.74Mt
vs. demand 3.54Mt)

Prices ~\$15k/t amid Indonesian
oversupply

2026 Pivot

Demand +2.4% to 3.62Mt
(EV batteries +10kt to 470kt)

Surplus narrows to 160kt as
tariffs curb imports

Investor Angle

Laterite assets like ours de-risk
with 95% recovery rates
Quick path to production
amid policy push

Nickel Mining in America

529 Known Occurrences in the Klamath Mountains

US Laterite Heartland

Southern Oregon/Northern California holds the largest untapped Ni supply - formed by weathering of ultramafic rocks over millions of years.

Riddle Legacy

Largest US Ni mine (Nickel Mountain, OR) - produced 50Mt @ 1.5% Ni (1954-1983); validates district.

Why Now?

FAST-41 + Trump EO accelerate development - low-sulfur, non-toxic laterites = ESG-safe path to production.

Eagle Mine, Michigan

- Underground nickel sulphide
- 5.16 Mt @ 3.1% Ni, 2.6% Cu
- 440 million pounds contained Ni
- In production
- Closure estimated 2027-2029

Tamarack Deposit, Minnesota

- Underground, nickel sulphide
- 17.03 Mt @ 1.28% Ni
- 480 million pounds contained Ni
- 8 separate deposits
- Not yet in production

PATRIOT: Surface Nickel - Near-surface laterite mining, no deep shafts required

Low-Risk, High-Impact Mining

Near-Surface & Simple | High Recovery | Environmentally Safe

Metric	Laterite (Patriot)	Sulphide (Eagle/Tamarack)
Depth	20-90 ft (surface)	1,000-5,000 ft (underground)
Capex	\$50-100M (aggregate-style)	\$500M-\$1B+
Permitting	1-2 yrs (FAST-41 eligible)	5-10 yrs (water issues)
Tailings	Low-S, non-toxic	Acid-generating, high risk
Recovery	Up to 95%	80-90%
Timeline to Production	3-5 yrs	7-10+ yrs

Unlocking Oregon's Untapped Nickel

Powerhouse

New American Explorer

Focus on US laterite Ni

Financial Strength

~\$14M CAD mkt cap; \$4.2M cash/securities (as of Sep 2025)

Includes CNC/NOB/BEX holdings + Vinland Lithium spin-out

2025 Momentum

2.2% Ni surface samples (Eight Dollar); Red Flat drilling approved

80% Earn-In to Cleopatra & Eight Dollar Mountain

Cleopatra + Eight Dollar Mountain: 80% earn-in

Combined >48 Mt historic resources (0.7% Ni cutoff)

Shallow exploration (avg. <20 ft) signals major upside

Cleopatra: 39.5 Mt @ 0.93% Ni - exploration confined to upper 20 ft; laterite extends to 80-90 ft

Eight Dollar Mountain: Recent surface sampling (Jul 2025) returned up to 2.2% Ni from laterite

Right of First Refusal: Red Flat, Woodcock, Shamrock - optionality only

Premier Laterite District - 100km of Infrastructure Access

Property	Type	Acres	Ownership	Key Metric
Cleopatra	Laterite	2,872	100%	39.5Mt @0.93% Ni (Meas+Ind+Inf)
Eight Dollar	Laterite	2,376	100%	2.2% Ni surface (Jul 2025); 9Mt historic @0.56%
Red Flat (ROFR)	Laterite	1,820	100%	18.8Mt @0.84% Ni; Drilling Q4 2025
Shamrock (ROFR)	Sulphide	758	100%	1.3% Ni/1.1% Cu bulk sample; 2025 sampling
Woodcock (ROFR)	Laterite	4,050	100%	New stake (Aug 2025); USGS high-grade

Location Edge

SW Oregon; Highway access; near ports (Gold Beach)

Upside

Shallow exploration (avg. 12ft) - deeper drilling to 50ft could double resources

CLEOPATRA

Untapped Laterite in SW Oregon

2,872

acres

139

lode mining claims

100%

owned

743M lbs Ni: Scalable, Shallow Resource

Historical Resource (0.7% Ni Cut-Off)
Total 39.5Mt @ 0.93% Ni (743M lbs contained)

Measured: 5.255Mt @ 0.98% Ni
Indicated: 14.548Mt @ 0.92% Ni
Inferred: 19.671Mt @ 0.92% Ni

Higher-Grade Core
949 acres avg. 1.12% Ni (>0.7% across
nearly all claims) - shallow sampling only;
laterite extends to 80-90ft untapped.

Investor Upside:
Minimal work since 2009. Sonic drilling
to 50ft could +50-100% tonnage.

Strategic Position

SW Oregon (Curry County), bordering California - 15km west of Hwy 199.
Direct access via Road 450. Near Riddle Mine (largest historic US Ni
producer, 39Mt @1.0-1.5% Ni, 1954-1983).

Administration

Federal BLM land. Regulated by Oregon DOGAMI (exploration permits) and
Mineral Land Regulation Board.

Higher-Grade Zone

30% of claims avg. 1.12% Ni - equivalent to 8-10Mt per vertical meter.
Largest resource in the portfolio.

CLEOPATRA

Road-Ready Access: De-Risked for Rapid Advancement

Access

Gravel road (Road 450) bisects property - truck/trailer to edge; boulder-covered interior requires trail upgrades (DOGAMI permit: ~6 months). Property ~80% burned (2010s) - easier clearing.

Infrastructure Edge

Near Hwy 199 (15km); power/water proximity; full road access supports low-capex ops (aggregate-style). 2024 Forest Service visit confirms logistics.

Recent Activity

2024 hand-augering confirmed grades; bulk sample planned for metallurgy.

2025-2026 Catalysts

Up to 70 sonic holes to 15m (50ft) in higher-grade zone (Q2 2026, post-permitting); resource verification; PEA scoping. FAST-41 eligible under Trump EO.

We believe Cleopatra to be one of the largest undeveloped nickel resources in the continental USA

EIGHT DOLLAR MOUNTAIN

High-Grade Wildcard: Surface Hits in Prime District

Strategic Position

SW Oregon (Josephine County), west of Selma; elevation 2,600-4,000ft. Bounded east by Hwy 199, west by Illinois River. In nickel-rich ultramafic belt, adjacent to Woodcock.

Size & Ownership

2,376 acres (962 ha) | 115 lode mining claims | 100% Owned (staked 2023)

Geology

Olivine-rich peridotite weathered to clay-rich laterite (upper 10-30ft); Ni (0.2-2.2%) + Co/Cr/Mo byproducts.

History

1942 Freeport pits/shafts; 1950s bulk sampling; DOGAMI 2018 mapped
wide Ni zone. Staked 2023

Recent Validation (Jul 2025)

56 surface samples avg. 0.67% Ni
(max 2.21%) - confirms historic highs

Historic Resource (Unclassified):
~9.0 Mt @ 0.56% (~110M lbs Ni)

Investor Upside:
Low-cost entry; 2026 sampling to
define +20Mt resource at >1% Ni potential

2025-2026 Catalysts

Q1 2026 surface sampling expansion | Resource classification | JV potential | FAST-41 eligible
Hwy 199 east boundary; forestry roads to summit - direct 4WD to core claims

RED FLAT (ROFR)

317M lbs Ni: Road-Accessible Laterite

2,015

acres

84

lode mining claims

100%

owned

18.8Mt

@ 0.84% Ni

Historical Resource (0.7% Ni Cut-Off, 2009)

18.8Mt @ 0.84% Ni --> 317M lbs contained

Measured: 4.0Mt @ 0.99% Ni

Indicated: 6.4Mt @ 0.81% Ni

Inferred: 8.3Mt @ 0.80% Ni

Grade Insight: Ni higher in rock vs. soil; 1950s trenches confirm >1% surface highs - laterite to 60ft+ untapped.

Investor Upside: Minimal work since 2009; 2025 drilling (up to 50 sonic holes to 15m) targets +50% resource growth.

Access & Catalysts

Access: Direct from Hwy 101 via Hunter Creek Rd
- 4WD gravel road to core claims; no major upgrades

Infrastructure: Proximity to Gold Beach port (15km) for logistics; power/water access

Recent: 2024 surface sampling validates historic grades; SUD approval Aug 2025 (44 sonic holes)

2025-2026: Q4 2025 drilling (600ft x 1,200ft grid, 1m intervals to 15m) - bulk samples for metallurgy; resource update H1 2026. FAST-41 eligible.

SHAMROCK (ROFR)

High-Grade Sulphide Bonus: Ni-Cu-PGE in Proven District

758 acres | 40 unpatented lode claims | 100% Owned

Strategic Position

SW Oregon (Jackson County), 20 miles NW of Medford; federal BLM land in nickel-copper belt.

Geology

Ultramafic peridotite/serpentinite intruded by norite/diorite; sulphides (pyrrhotite, pentlandite, chalcopyrite, pyrite) in lenses 3-25ft thick.

History

Early 1900s prospecting; 1949-50 USBM underground dev + 11 diamond drillholes (3,419ft total). 1952-53 USBM bulk removal.

Assays

200-lb composite: 1.3% Ni, 1.1% Cu, 0.07% Co, 0.03 oz/t Pt - 92% Ni/89% Cu recovery via flotation. Drillhole S68491: 1.19% Ni/1.97% Cu/3.4g/t TPM.

Why a Bonus Asset?

Sulphide complement to laterites; open high-grade lenses (Ni-Cu-Co-Pt) de-risked by 1940s-50s drilling.

Byproduct Potential:

Mn/Fe pods (23-32% Mn, 2-3.7% Fe)

Two lenses traced 1,500ft N-S

Access: Paved road direct to property

Near Medford for logistics

2025-2026 Catalysts:

Q1 2026 outcrop sampling + resource classification. FAST-41 eligible.

No modern work - Q1 2026 sampling targets resource definition + PGE/Co value.

Combined Resource: 1.1B+ lbs Contained Nickel

All Properties Combined - Low-Capex, ESG-Safe, FAST-41 Eligible

1.1B+

lbs Contained Ni

Combined resources

5

Properties

Woodcock	USGS high-grade	TBD

TECHNOLOGY PARTNER

CVMR® Corporation

Vapour Metallurgy | 40+ Years Global Experience | Operations in 20 Countries

NATO & US Government Certified Supplier (NCAGE # L08P1)

US Department of Defense | US Department of Energy | Canadian Department of Defense

NASA | US Bureau of Engraving | Argonne National Laboratory

Integrated processing solution for Patriot Nickel's laterite resources

CVMR® CORPORATION

Global Experience in Metal Refining

Privately held with operations in 20 countries

Refines and manufactures high-value metals directly from ore, scrap, mining concentrates and mattes:

- Nickel, Iron, Cobalt, PGMs
- Tantalum, Niobium, Lithium, Molybdenum
- Vanadium and all 17 Rare Earth Elements

40+ years developing unique processes for refining Transition Metals with high purity and unique materials performance.

Chemical vapour metal refining based on a proven method discovered 135 years ago; refines 25% of global nickel and 15% of iron supply today.

60+ seminal patents on advanced, proprietary processes and technologies.

Key Clients & Partners

Government & Defense:

NATO, US DOD, US DOE, Canadian DOD

Science & Research:

NASA, Argonne National Laboratory

US Bureau of Engraving, US Mint

Industry:

General Motors, Virgin Galactic

Pfizer (medical tools)

Canadian Navy (sonar equipment)

Landmark Project:

Sudbury Neutrino Observatory (SNO)

1,200 high-purity Ni tubes (99.9999%)

Director won Nobel Prize in Physics 2015

Proprietary Processes & High-Value Products

Vapour Metallurgy Processes

Uses low-grade ores to produce high-value products:

- Metal powders & nano-powders
- Complex net shapes & super alloys
- Mixed Hydroxide Precipitate (MHP)
- High-purity graphite sponge

Applications:

- 3D printing & additive manufacturing
- EV battery manufacturing
- Aerospace & defense parts
- Medical instruments (Pfizer)
- Computer & electronic components

Zero pollution of air, water or soil

Modular plant system - 5M+ tons/year capacity

Flexible output - switch products by changing parameters

High-Value Carbonyl Products (NVD)

Nickel Vapour Deposition (NVD) Products:

- Nickel coated carbon fibre
- Medical tools (Pfizer)
- Sonar equipment (Canadian Navy)
- NASA camera dome mirrors
- US dollar money plate
- Silicon wafer deposition

Iron Carbonyl Powder Products:

- 3D printing feedstock
- Ferro magnetic fluid
- Iron supplement (pharmaceutical)
- Injection molding compounds

Global Plants: Toronto (pilot), Jilin China, Meta Nickel (Turkiye)

CVMR® + Patriot Nickel: Integrated Value Chain

1. EXTRACTION

Patriot Nickel

Aggregate-style surface
mining
Low-capex laterite extraction
\$50-100M vs \$500M+ sulphide

2. PROCESSING

CVMR®

Vapour metallurgy refining
Zero-pollution technology
Modular 5M+ tons/year plants

3. PRODUCTS

Joint Value

High-purity nickel powders
EV battery materials (MHP)
Aerospace & defense alloys

4. MARKETS

End Users

Tesla, GM, defence contractors
NASA, medical, 3D printing
EV battery manufacturers

CVMR® CORPORATION

Modular Plant Technology & Global Operations

Modular Plant System

Key Components:

Carbonylation vessels

Thermal oxidizer

Reformation unit

Clean metal collection & storage

Environmental controls

Flexible: change output by adjusting parameters

Process diverse minerals from various sources

Global Operations

Toronto, Canada - Pilot Plant

Feasibility studies for major clients

Saves capital cost of building pilot plants

Jilin, China - Ni & Fe Carbonyl Plant

World's largest powder decomposer

Meta Nickel, Turkiye

MHP production for battery industry

Battery & Advanced Materials

High-Purity Graphite Sponge - Critical to battery performance

"Canadian firm turns CO₂, methane and coal to graphite" - breakthrough technology

MHP (Mixed Hydroxide Precipitate) - directly for EV battery industry

US Dollar Money Plate - designed, engineered, and built the equipment for new US money plate

Interoceanmetal JV - exclusive deep ocean mining rights (150,000 km² Clarion Clipperton field)

Investment Thesis

1

Critical Supply Gap

Only 0.2% of global nickel from the US. Eagle Mine closes 2029. No major US laterites in production - Patriot fills the gap.

2

Policy Tailwinds

Trump EO 14241 + FAST-41 fast-tracks permitting (1-2 yrs vs 5-10). 10-25% import tariffs on Indonesian nickel. IRA incentives for domestic supply.

3

Proven Resources

1.1B+ lbs contained Ni across 5 properties. 39.5Mt @ 0.93% Ni at Cleopatra alone. Up to 95% recovery rates with laterite processing.

4

Low-Capex Model

Surface mining (\$50-100M vs \$500M+ underground). Aggregate-style ops. Road-accessible properties near highways and ports.

5

Technology Edge

CVMR® partnership: 40+ years refining expertise. Zero-pollution vapour metallurgy. NATO/DOD/NASA-certified. High-value product outputs.

Key Catalysts & Timeline

Q4 2025	Q1 2026	Q2 2026	H2 2026+
• Red Flat: 44 sonic holes drilling program • Red Flat: SUD approval complete • Surface sampling validation across properties	• Eight Dollar Mountain: Surface sampling expansion • Shamrock: Outcrop sampling + workings relocation • Resource classification updates	• Cleopatra: Up to 70 sonic holes to 50ft • Cleopatra: Resource verification + PEA scoping • Eight Dollar: JV potential	• Red Flat: Resource update publication • Cleopatra: Expanded resource estimate • CVMR processing pathway integration • Production pathway development

All properties FAST-41 eligible under Trump EO 14241 - accelerated permitting (1-2 years vs 5-10 typical)

PATRIOT NICKEL

Forging America's Nickel Independence

1.1B+ lbs Contained Nickel | 5 Oregon Properties | FAST-41 Eligible
